

Handles

The materials used to produce handles are of high quality and extremely strong.

This is the basic feature of our product set.

The special shape, the proportions and the considerable thickness, make the handle very strong.

The handle has an internal bar in glass-fibre, that makes it last long.

Transparent handle

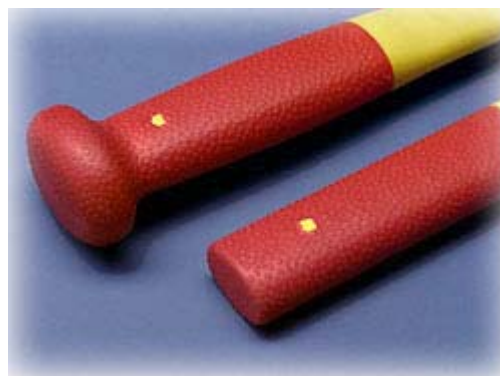

When the handle is moulded in transparent colors, you can see the internal bar in glass-fibre.

Impugnatura in gomma

The grips are made of thermoplastic rubber with a drawing in artificial anti-slide leather.
The grip of the tiler - handle is made of polyurethane, a knock-resistant material.
